```

Join the datasets we're interested in into one dataset.

Here we join the datasets of interest based on a shared date and state of measurements.

```
df <- inner_join(covid_daily_df, move_daily_df, by = c("year", "month", "day", "statefips"))

df <- inner_join(df, affinity_daily_df, by = c("year", "month", "day", "statefips"))

#There's definitely a better way to do this, I just don't know what it is.
